15 Functional Functions

1. Search for the names
2. Create a new profile
3. Search by the major
4. Be able to switch between the different roles of the AI
5. Change the answers to the certain questions easily
6. Find the different courses that are required in said subject
7. Have the ability to plan for the next semester such as in the wolverine track
8. Have a what-if since you should be able to see what would work with different majors
9. Recommend certain classes based on previous searches
10. Data security to make sure everything doesn't get leaked
11. Switch between the different majors
12. Select classes that have been taken already
13. Have a text box to enter the input
14. Give a correct response
15. Schedule an appointment

3 Non-functional Functions

16. The user interface should be seamless making sure that there will be very minimal user error and that it won't break the system if one was to arise.
17. Be able to handle multiple user and inputs at the same time cause many times students are bouncing back and forth especially when planning their schedules
18. Make sure that the response isn't random and that if an incorrect response were to arise there won't be any issues within the system.
